

# I SIMPOSIO NACIONAL de ONCOLOGÍA de PRECISIÓN

Vigo, del 28 de febrero al 1 de marzo de 2019

## **Biomarcadores: lo que ya tenemos**

**Dr. Santiago Ramón y Cajal**  
Professor of Pathology, UAB.  
Chair of the Pathology Department  
Hospital Universitari Vall d'Hebron de Barcelona.  
Member of the National Academy of Medicine of Spain

## índice

1. Donde estamos: premisas básicas
2. Situación actual Biomarcadores (mama, pulmón, colon, otros)
3. Pitfalls en diagnóstico
4. Donde vamos

# I SIMPOSIO NACIONAL de ONCOLOGÍA de PRECISIÓN

Vigo, del 28 de febrero al 1 de marzo de 2019

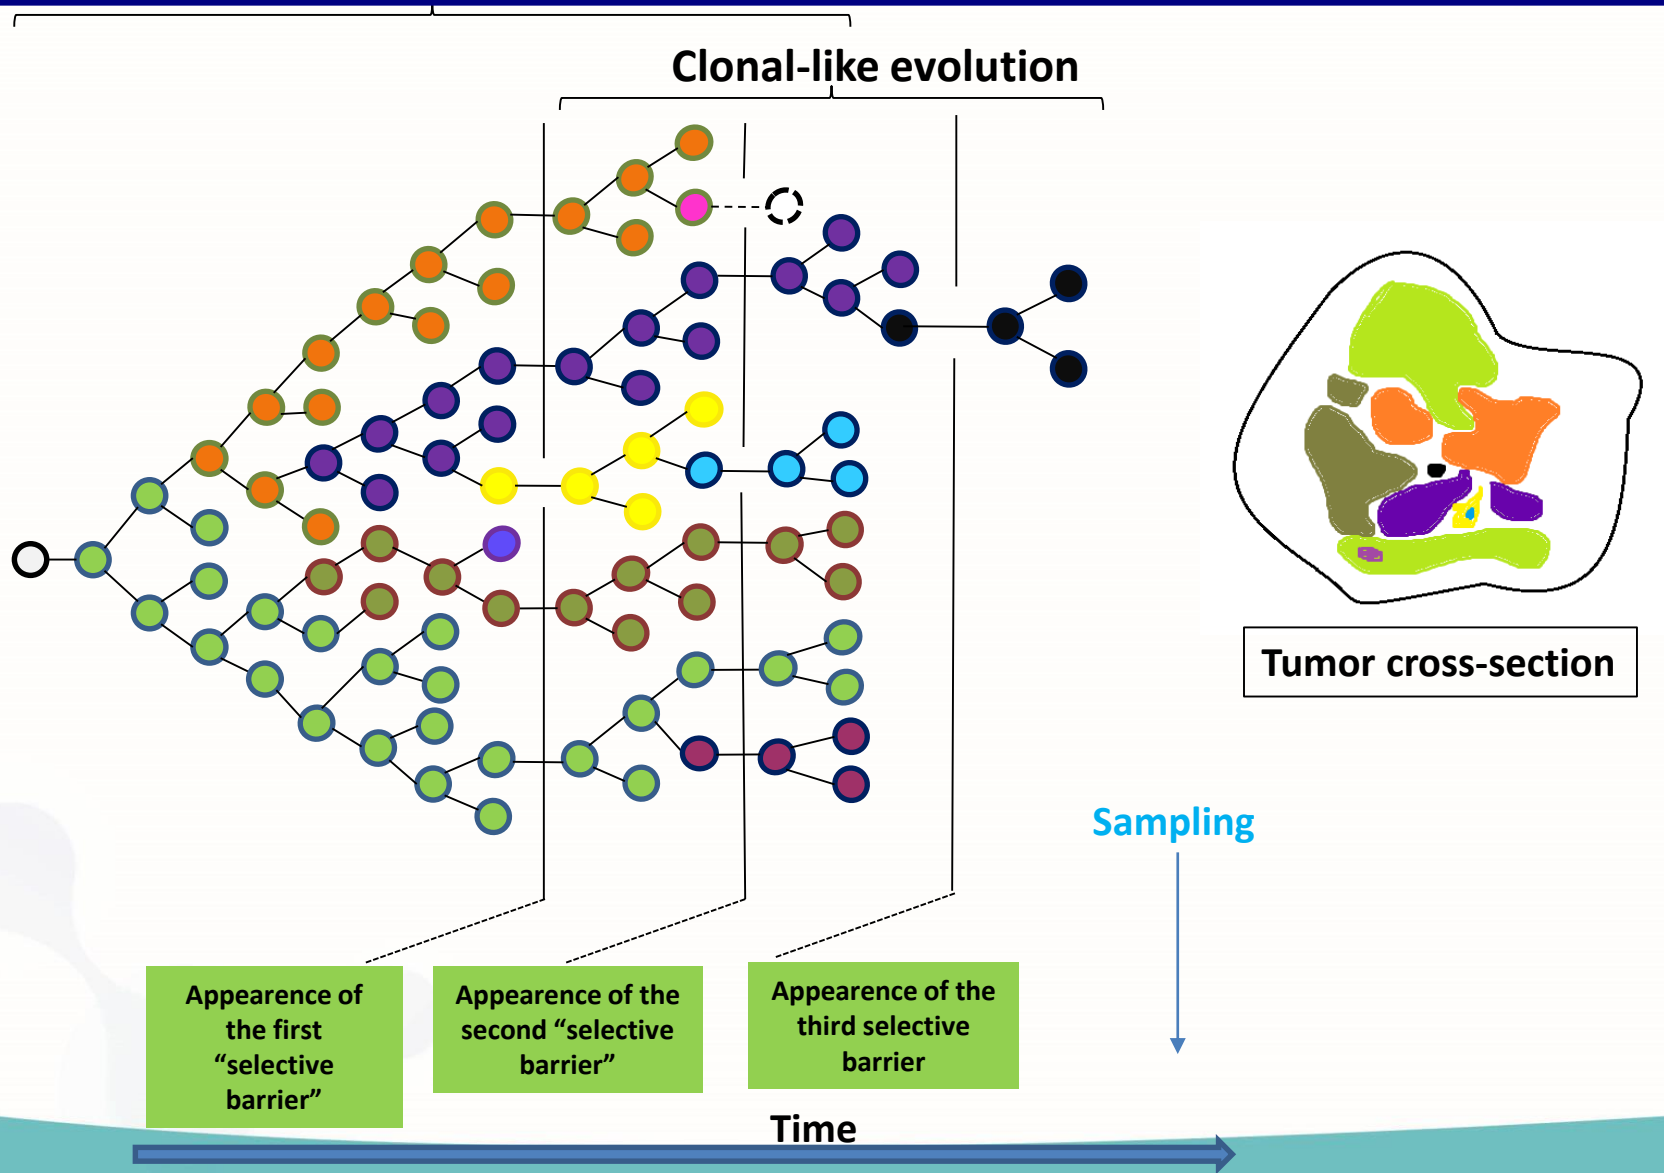

## Early detection vs metastasis. 5 years survival

**In most carcinomas survival is less than 30% with metastasis**

# In most tumors, there are areas with different genetic alterations.

# I SIMPOSIO NACIONAL de ONCOLOGÍA de PRECISIÓN

Vigo, del 28 de febrero al 1 de marzo de 2019

# Tumor heterogeneity

There are a huge number of molecular alterations in malignant tumors.

- > 2,000 constitutive genetic alterations

- genes drivers, passenger genes

- > 1,000 translocations

- > Thousands of non-coding RNA (lncRNAs, microRNAs)

- Hundreds of epigenetic alterations

- Polymorphisms (SNPs)

**Dozens / hundreds of genetic alterations  
accumulate**

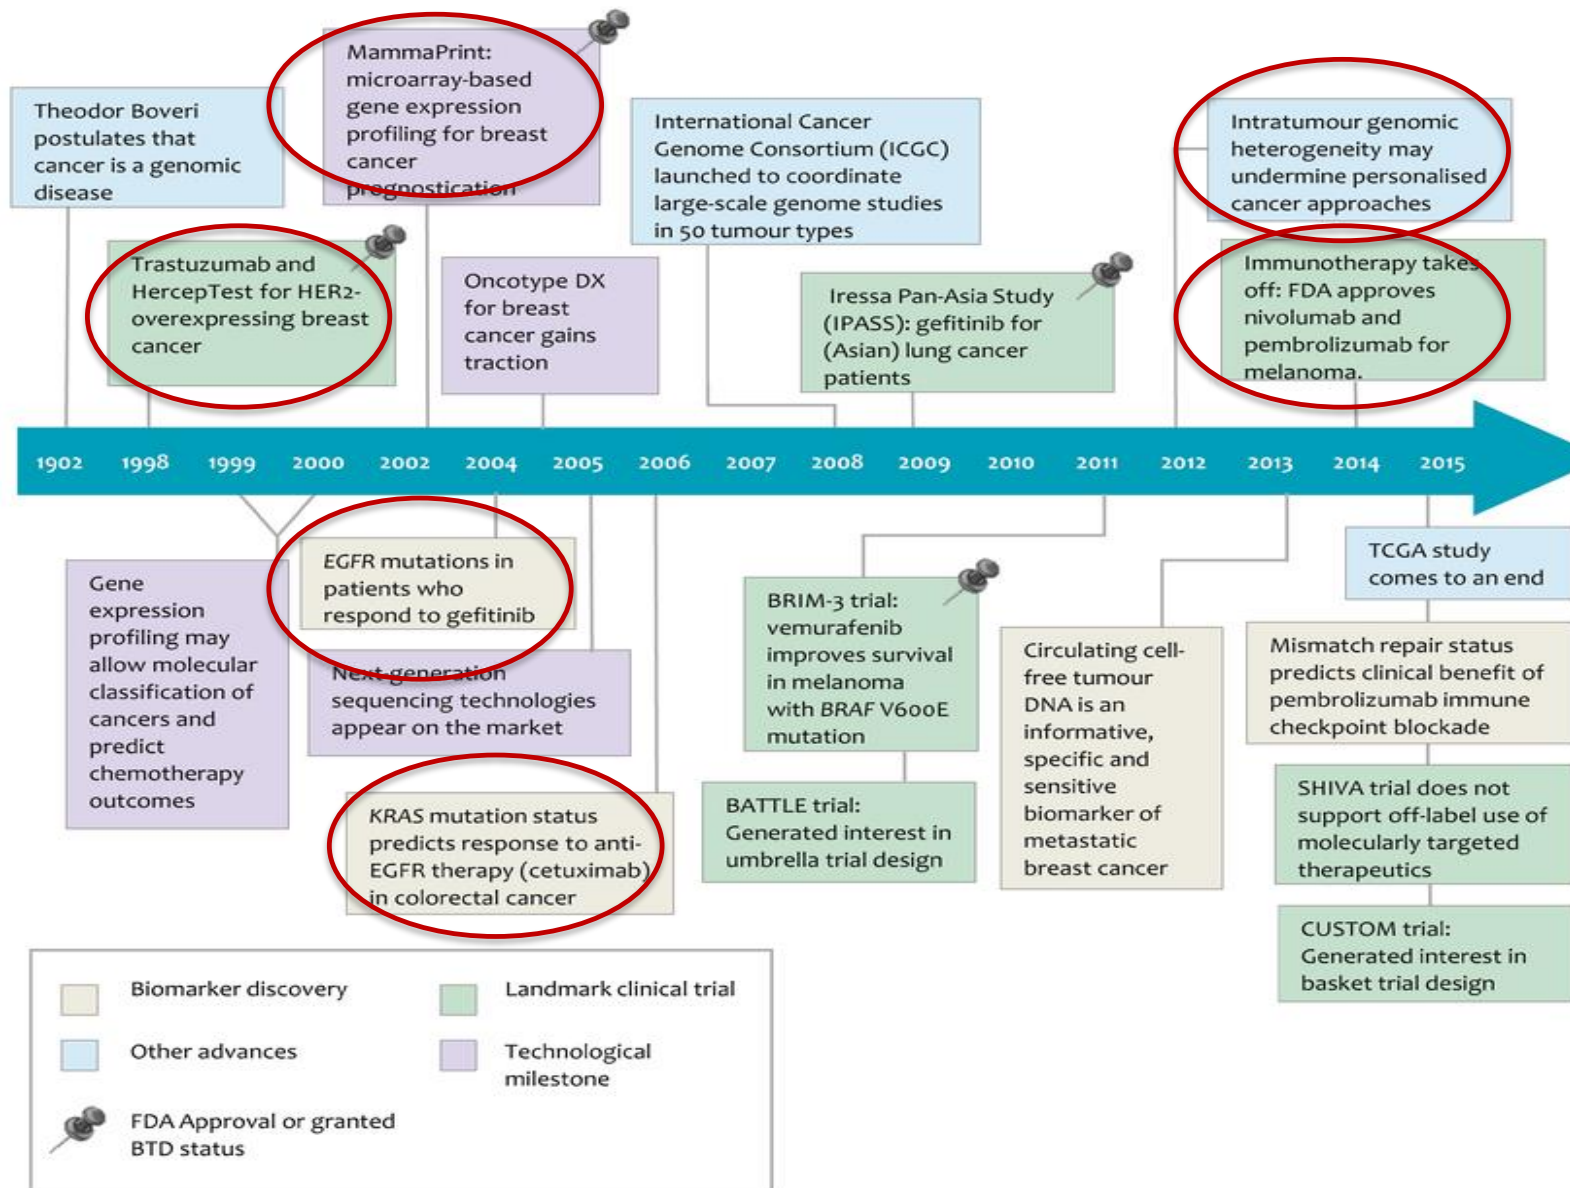

# índice

## 2. Situación actual Biomarcadores (mama, pulmón, colon, otros)

## Triple negative breast carcinoma

Interim OS analysis: PD-L1+ population

**Stratified HR = 0.62**  
(95% CI: 0.45, 0.86)<sup>a</sup>

	Atezo + nab-P (n = 185)	Plac + nab-P (n = 184)
OS events, n	64	88
2-year OS (95% CI), %	54% (42, 65)	37% (26, 47)

No. at risk:

Atezo + nab-P	185	177	160	142	113	61	36	22	15	9	5	NE	NE
Plac + nab-P	184	170	147	129	89	44	27	19	13	6	NE	NE	NE

# Prospective Clinical Trials to Assess Role of Multigene Prognostic Tests

## TAILORx (OncotypeDX)

- Trial Assigning Individualized Options for Treatment*
- RxPONDER (OncotypeDX)
- Rx for Positive Node Endocrine Responsive Breast Cancer*

## MINDACT (MammaPrint)

- Microarray in Node Negative Disease May Avoid Chemotherapy*

- *PAM 50*

The TAILORx trial demonstrated that women with low recurrence scores had a 98% survival supporting its ability to lower cost of care

B Doble, 2016

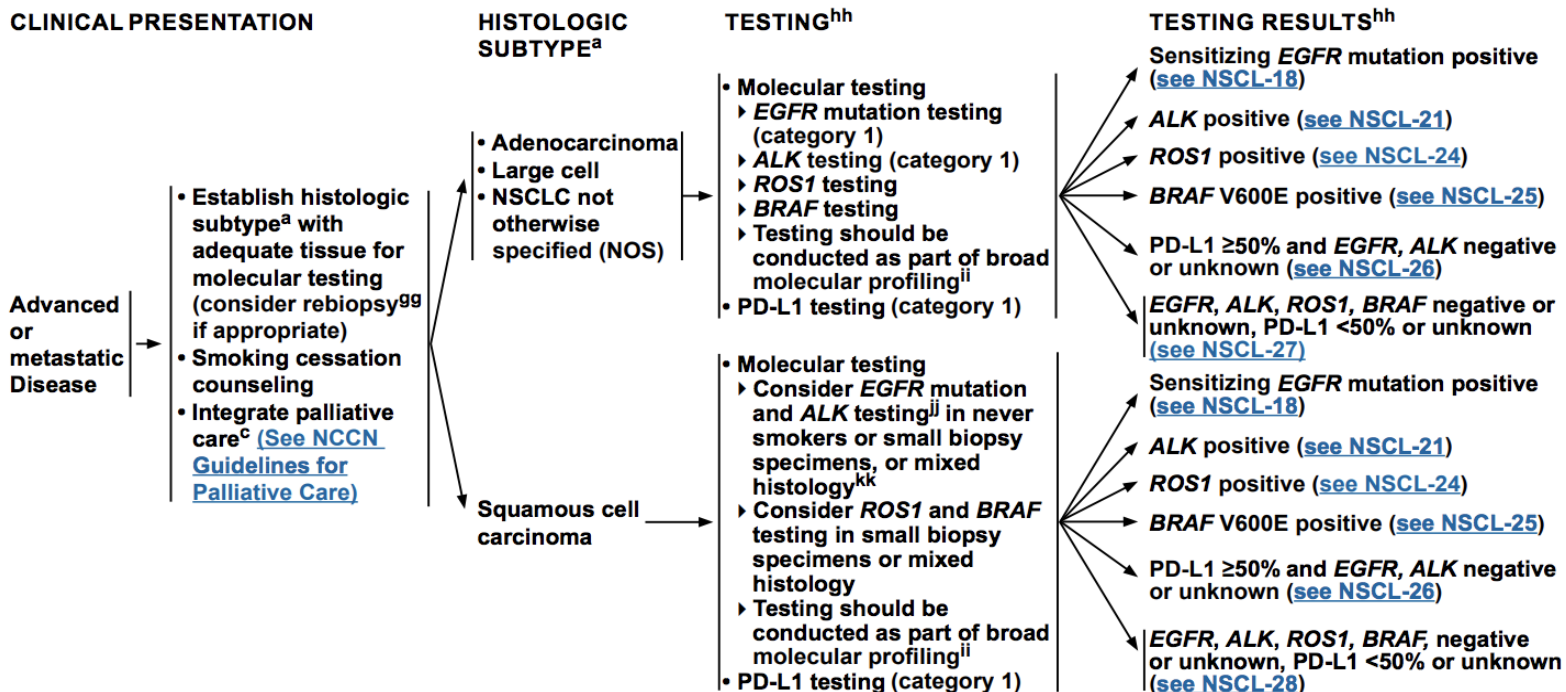

PAM50, Risk of Recurrence (ROR) Score provided more prognostic information in endocrine-treated, ER+, node- patients than OncotypeDx recurrence score, especially in HER2-negative group. More patients scored as high risk and fewer as intermediate risk *JCO, 2013*

## NCCN Guidelines Version 1.2019 Non-Small Cell Lung Cancer

[NCCN Guidelines Index](#)  
[Table of Contents](#)  
[Discussion](#)

<sup>a</sup>See [Principles of Pathologic Review \(NSCL-A\)](#).

<sup>c</sup>Temel JS, Greer JA, Muzikansky A, et al. Early palliative care for patients with metastatic non-small-cell lung cancer. *N Engl J Med* 2010;363:733-742.

<sup>gg</sup>If repeat biopsy is not feasible, plasma testing should be considered.

<sup>hh</sup>See [Principles of Molecular and Biomarker Analysis \(NSCL-G\)](#).

<sup>ii</sup>The NCCN NSCLC Guidelines Panel strongly advises broader molecular profiling with the goal of identifying rare driver mutations for which effective drugs may already be available, or to appropriately counsel patients regarding the availability of clinical trials. Broad molecular profiling is a key component of the improvement of care of patients with NSCLC. See [Emerging Biomarkers to Identify Patients for Therapies \(NSCL-H\)](#).

<sup>jj</sup>In patients with squamous cell carcinoma, the observed incidence of *EGFR* mutations is 2.7% with a confidence that the true incidence of mutations is less than 3.6%. This frequency of *EGFR* mutations does not justify routine testing of all tumor specimens. Forbes SA, Bharmia G, Bamford S, et al. The catalogue of somatic mutations in cancer (COSMIC). *Curr Protoc Hum Genet* 2008;chapter 10:unit 10.11.

<sup>kk</sup>Paik PK, Varghese AM, Sima CS, et al. Response to erlotinib in patients with *EGFR* mutant advanced non-small cell lung cancers with a squamous or squamous-like component. *Mol Cancer Ther* 2012;11:2535-2540.

**Note:** All recommendations are category 2A unless otherwise indicated.

**Clinical Trials:** NCCN believes that the best management of any patient with cancer is in a clinical trial. Participation in clinical trials is especially encouraged.

# I SIMPOSIO NACIONAL de ONCOLOGÍA de PRECISIÓN

Vigo, del 28 de febrero al 1 de marzo de 2019

## PRIORIZACIÓN DE BIOMARCADORES

- En el momento del diagnóstico, determinamos EGFR, ALK, ROS1 y PD-L1 a la vez en todos los CCNP no escamosos en estadio metastásico
- En el momento del diagnóstico, determinamos PD-L1 en todos los carcinomas escamosos en estadio metastásico
- En el momento de la recidiva a petición de Oncología
- Otros genes (cmet, ret, BRAF, RAS, HER2,...): NGS

## NCCN Guidelines Version 2.2018 Colon Cancer

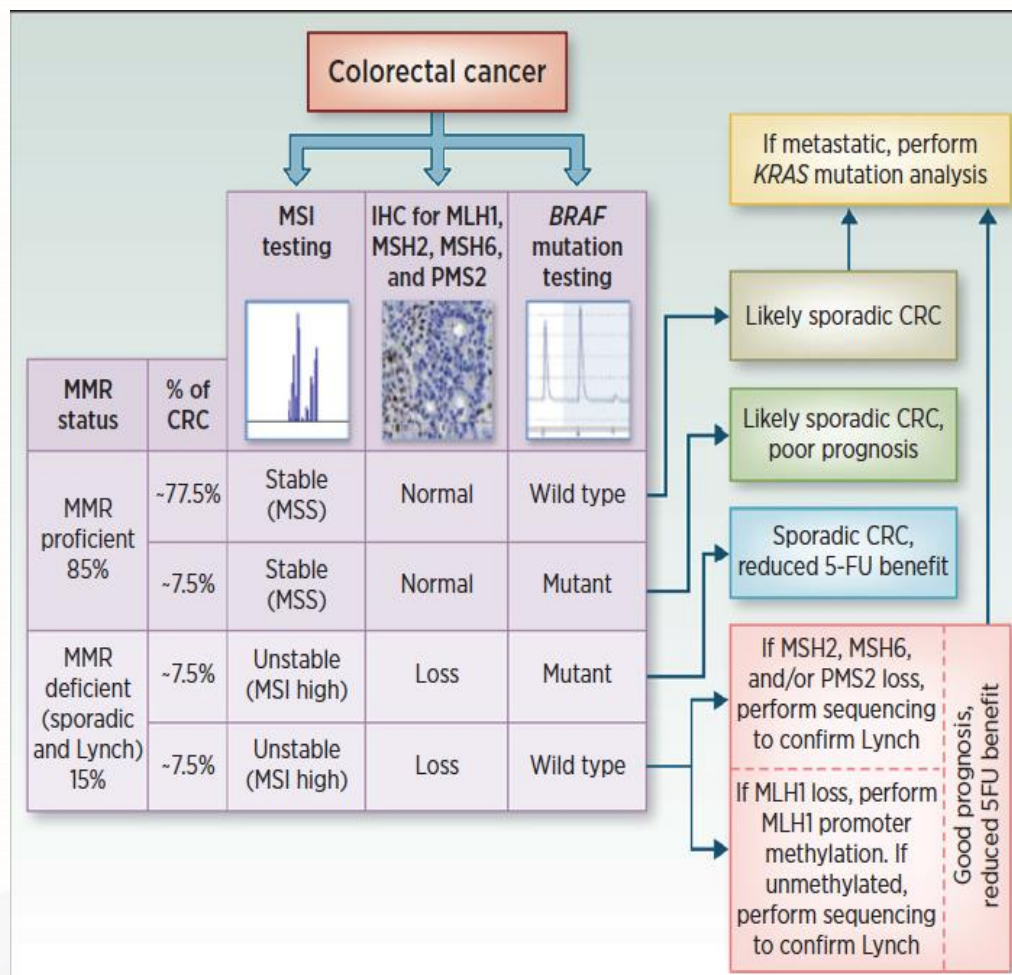

03-2018

### KRAS, NRAS, and BRAF Mutation Testing

- All patients with metastatic colorectal cancer should have tumor tissue genotyped for *RAS* (*KRAS* and *NRAS*) and *BRAF* mutations. Patients with any known *KRAS* mutation (exon 2, 3, 4) or *NRAS* mutation (exon 2, 3, 4) should not be treated with either cetuximab or panitumumab.<sup>43,44,45</sup> *BRAF* V600E mutation makes response to panitumumab or cetuximab highly unlikely unless given with a *BRAF* inhibitor.<sup>46-48</sup>

## MSI testing algorithm proposed in 2012 by the Association for Molecular Pathology

## In gastric carcinomas...

	Biomarker type	Indication for testing	GC patients who should be tasted
MSI/MMR proteins	Diagnostic	Lynch Syndrome Screening	All patients
	Predictive	Immunotherapy	
	Pronostic	Choose therapy in early stages GCs	
HER2	Predictive	Trastuzumab in advance HER2+ GC	All patients
EBV	Predictive	Immunotherapy	Metastatic GCs
PD-L1	Predictive	Immunotherapy	Metastatic GCs

# I SIMPOSIO NACIONAL de ONCOLOGÍA de PRECISIÓN

Vigo, del 28 de febrero al 1 de marzo de 2019

- **Heterogeneous staining** is more common in gastric and GE junction cancer than in breast cancer
- In gastric cancer, tumour heterogeneity occurs in **5-30% of cases**

Hofmann M, et al. Histopathology 2008; 52:797-805  
Rüschoff J, et al. Der Pathologe 2010

## 3. Pitfalls en diagnóstico

- a) HG intratumoral
- b) sesgos diagnóstico molecular
  - IHQ vs NGS vs arrays
  - especificidad tisular
- c) control calidad

## Molecular biology in breast cancer: Intrinsic subtypes and signaling pathways

**A**

Molecular Subtype	Frequency	ER/PRg/HER2	CK5/6 EGFR	Genes of Proliferation	Characteristics genes	Histologic grade	TP53 mutations	Prognostic
Basal-like	10-20%	ER- PRg- HER2-	+	High	KRT5, CDH3, ID4, FABP7, KRT17, TRIM29, LAMC2	High	High	Bad
HER2-enriched	10-15%	ER- PRg- HER2+	+/-	High	ERBB2, GRB7	High	High	Bad
Normal breast-like	5-10%	ER+/+ HER2-	+	Low	PTN, CD36, FABP4, AQP7, ITGA7	Low	Low	Intermediate
Luminal A	50-60%	ER+ PRg+ HER2-	-	Low	ESR1, GATA3, KRT8, KRT18, XBP1, FOXA1, TFF3, CCND1, LIV1	Low	Low	Excellent
Luminal B	10-20%	ER+/+ PRg+/- HER2-/+	-	High	ESR1, GATA3, KRT8, KRT18, XBP1, FOXA1, TFF3, SQLE, LAPTM4B	Intermediate/High	Intermediate	Intermediate/Bad
Claudin-low	12-14%	ER- PRg- HER2-	+/-	High	CD44, SNAB	High	High	Bad

**B**

**C**

Poca concordancia con los estudios de IHQ  
Entorno al 50% de los HER2+ y > 20% de los tumores Luminal B  
y claudin low

Fig. 1. (A) Features of molecular subtypes of breast cancer. (B) Kaplan–Meier curves of disease-free survival and overall survival based on UNC337 database. Dark blue, luminal A; light blue, luminal B; red, basal-like; pink, HER2-enriched; yellow, Claudin-low....

# Alteraciones genómicas y especificidad tisular

A) **BRAF**: mutations and translocations in melanocytic nevi, malignant melanomas, colon adenocarcinomas, glioblastomas or pilocytic astrocytomas,...

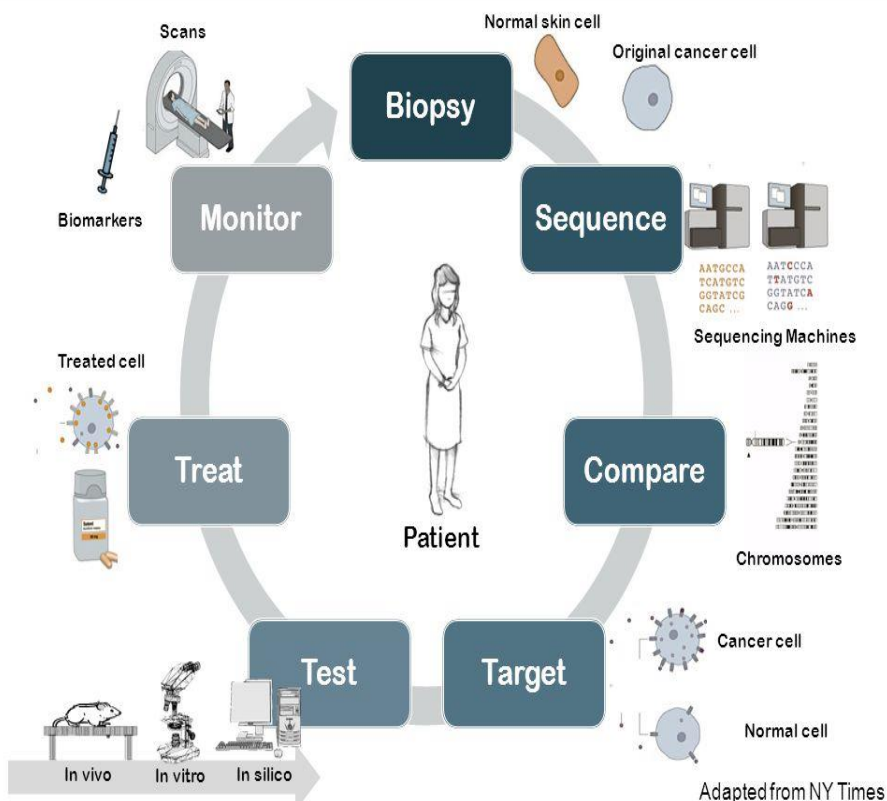

B) **EGFR**: mutations in lung adca, amplificado en gliomas, sobreexpresado en adca.colon,....

C) **ALK** gene fusions: IMT, ALCL anaplastic lymphomas, pulmonary/breast/ovary/colon adenoCA, renal medullary CA, Spitz nevi and atypical Spitz neoplasms

# I SIMPOSIO NACIONAL de ONCOLOGÍA de PRECISIÓN

Vigo, del 28 de febrero al 1 de marzo de 2019

## Precision Oncology 2.0 (Today)

## Novel precision medicine trial designs

### Umbrella trial

1 type of cancer  
Different genetic mutations (●●●)

### Basket trial

Multiple types of cancer  
1 common genetic mutation (●)

# I SIMPOSIO NACIONAL de ONCOLOGÍA de PRECISIÓN

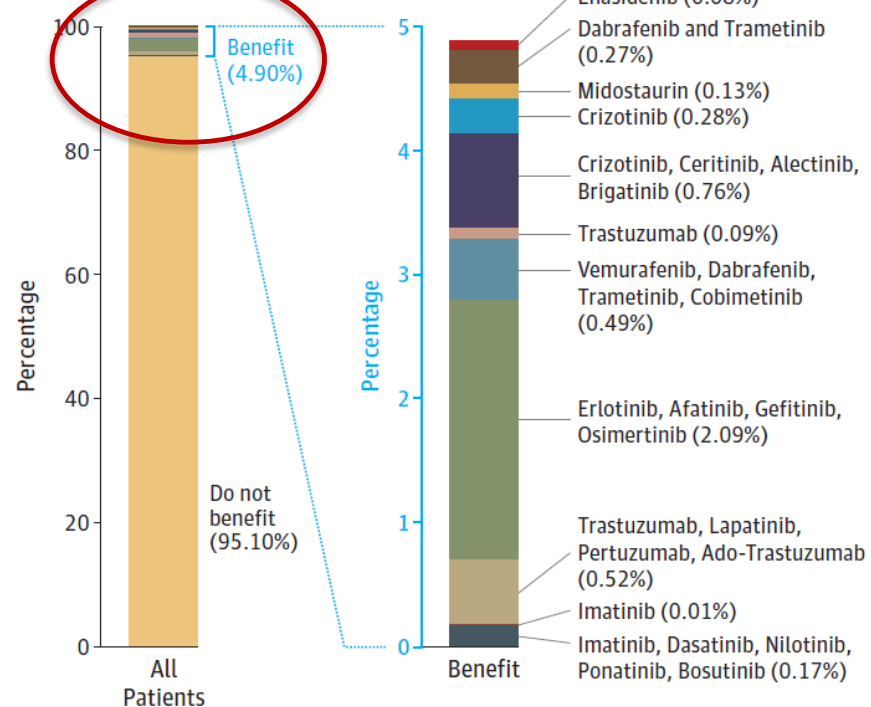

Vigo, del 28 de febrero al 1 de marzo de 2019

Figure 1. Estimated US Patient Eligibility and Benefit From Genomically Targeted Benefit, 2018

**A** Genomically targeted eligible 2018

**B** Genomically targeted benefit 2018

## Alteraciones moleculares “No” específicas tipo tumor”: **clasificación molecular**

- Drivers compartidos por varios tipos de tumores: BRAF, ALK, EGFR,..  
(Umbrella and basket trials: NCI-MATCH,..)
- **Problema:** La inhibición de drivers no tiene el mismo efecto clínico según la localización y tipo de tumor; ej, BRAF, ALK, EGFR,..
- Diferentes feedbacks +/- según tejido, microambiente,..

## SHIVA trial results: primary endpoint PFS

# ***Problemas diagnóstico biomarcadores***

a) HG intratumoral

b) sesgos diagnóstico molecular

IHQ vs NGS vs arrays

especificidad tisular

c) control calidad

## False Negative

↓  
Cores validated to have same HER2 expression and gene status; obtained from different patients

↓  
Stain and return slides for NordiQC to interpret

Staining assessed as:

- Optimal
- Good
- Borderline (low signal-to-noise ratio)
- Poor (false negative or false positive staining)

↓  
Results pooled and published every 6 months

# 11%

For approved IVD

# 25%

For Lab Dev IVD

### How do we test for HER2 ? HER2 IHC quality

Vigo, del 28 de febrero al 1 de marzo de 2019

## False Positive

↓  
Cores validated to have same HER2 expression and gene status; obtained from different patients

↓  
Stain and return slides for NordiQC to interpret

Staining assessed as:

- Optimal
- Good
- Borderline (low signal-to-noise ratio)
- Poor (false negative or false positive staining)

↓  
Results pooled and published every 6 months

# 0%

For approved IVD

# 5%

For Lab Dev IVD

## *Controles de calidad SEAP*

HER IHQ (>100 labs): puntuación regular un **18%** y pobre un **1%**.

HER 2 FISH (50): valoración regular o pobre en el **6%**

IHQ ALK: 57, FISH ALK:40 (27)

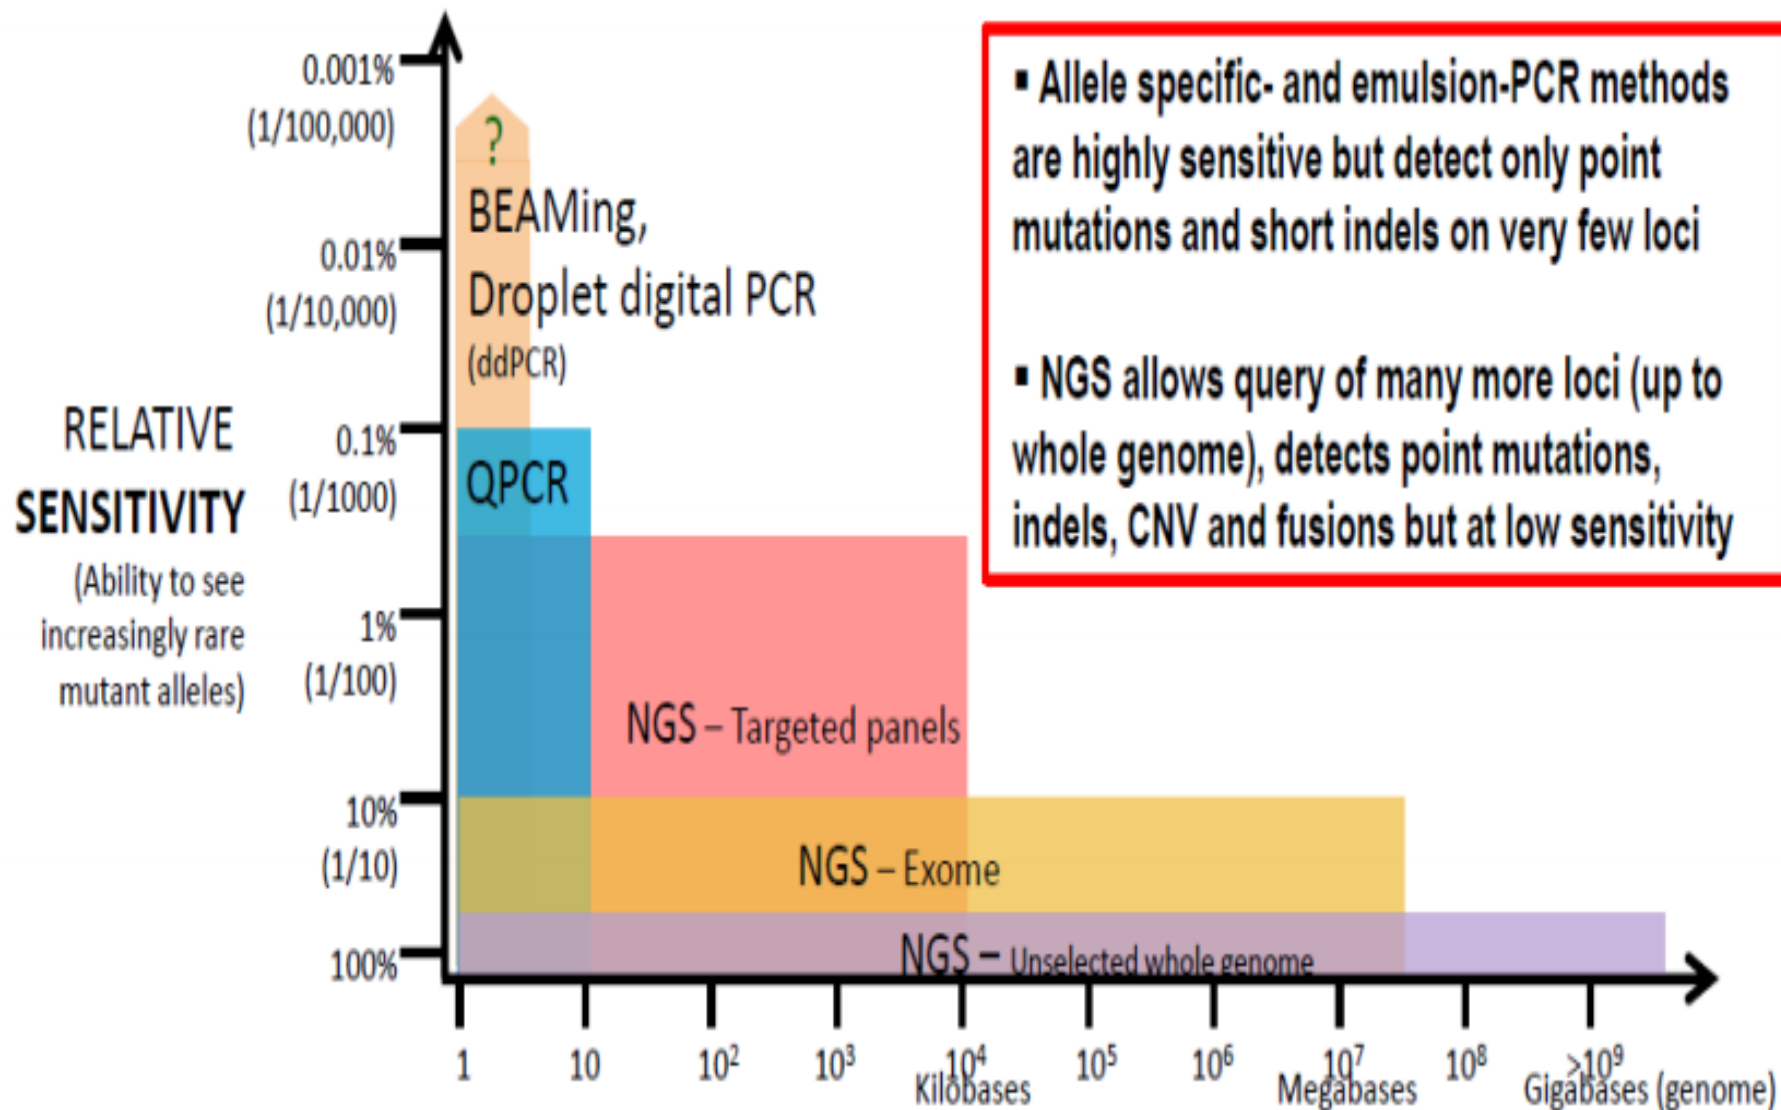

Ras: 33 labs, EGFR: 40

# Donde vamos

1. Implementación generalizada plataformas NGS y multiplexing
2. La biopsia líquida

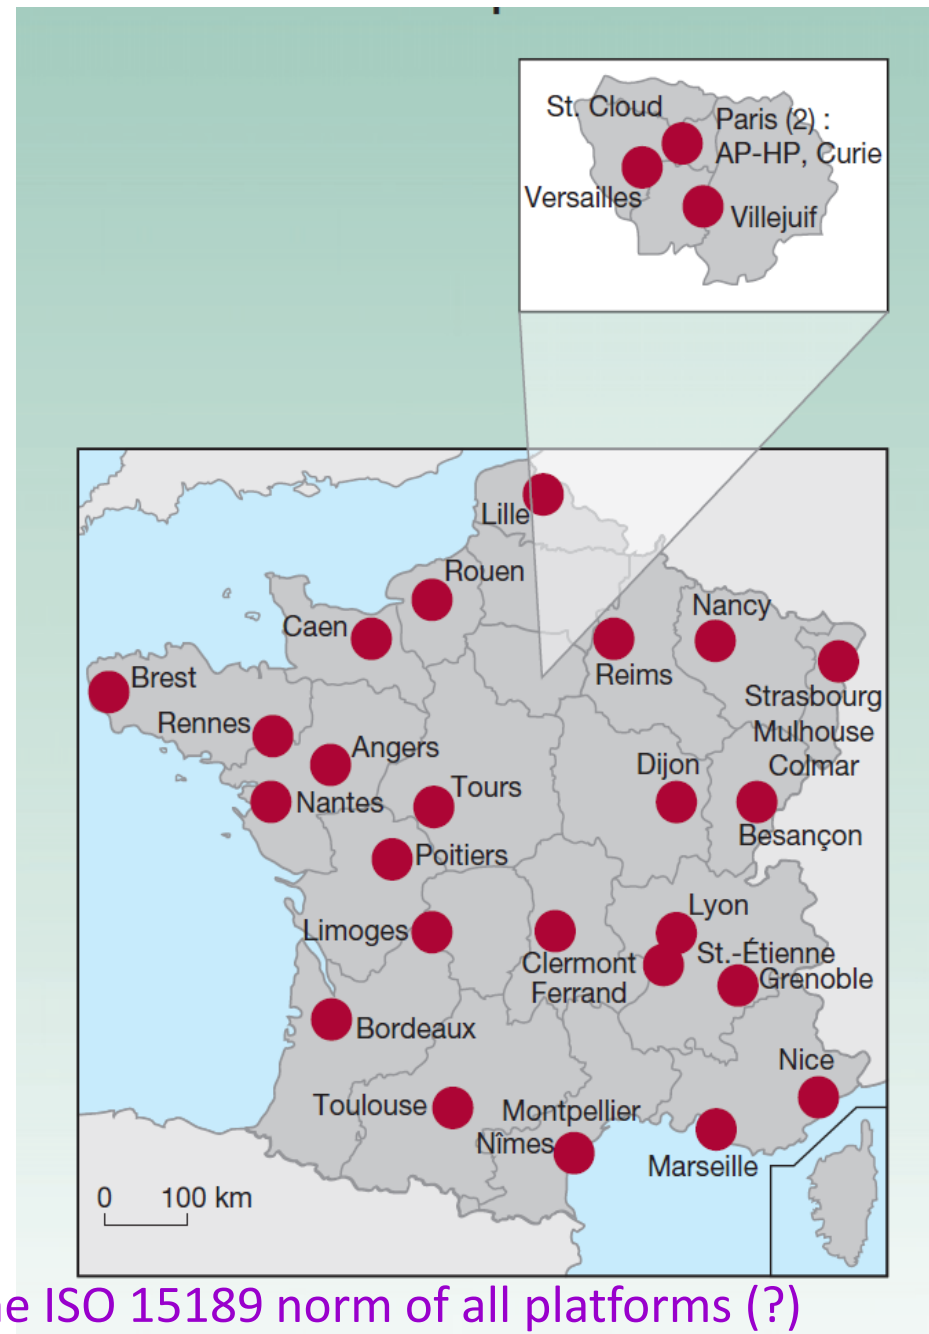

# Donde vamos

3. Biomarcadores y Oncoguías
4. Controles de calidad.
5. Centros de referencia

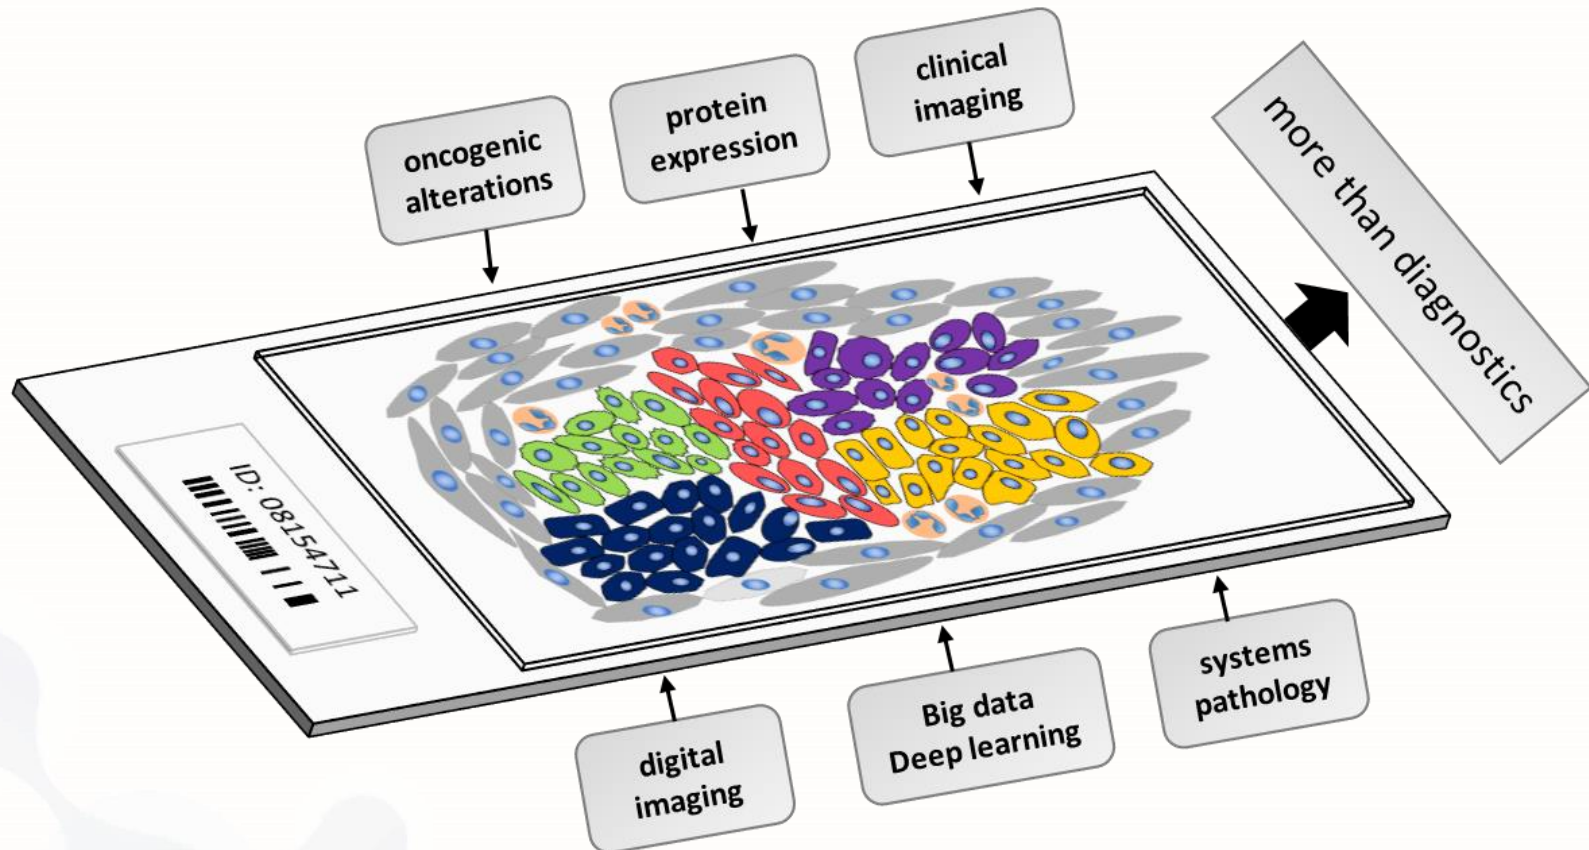

1. Developement of 28 public molecular laboratories in France for molecular testing
2. Funding for these laboratories came from the French Ministry of Health
3. Biomarker analyses do not need (currently) to be submitted for reimbursement

Ensuring equal access to personalized cancer treatment is a public health requirement in France

Toward an accreditation according the ISO 15189 norm of all platforms (?)

## Integrating clinical, molecular, proteomic and histopathological data within the tissue context: *Tissunomics*

# I SIMPOSIO NACIONAL de ONCOLOGÍA de PRECISIÓN

Vigo, del 28 de febrero al 1 de marzo de 2019

Muchas gracias!!!

Santiago Ramón y Cajal  
Vall d'Hebron University Hospital  
Barcelona, Spain

Normal Breast  
Luminal A      Claudin-low      HER2-enriched  
Luminal B      Basal-like

## Intrinsic Subtypes

Perou et al., Nature 2000  
Sorlie et al., PNAS 2001  
Sorlie et al., PNAS 2003  
Hu et al., BMC Genomics 2006  
Herschkowitz et al., GB 2007  
Cheang et al. JNCI 2008  
Parker et al., JCO, Feb 2009  
Prat et al., BCR 2010  
Nielsen et al., CCR 2010  
Cheang et al., CCR 2012

There is heterogeneity within the molecular subtypes:  
**EVEN THE SUBTYPES HAVE SUBTYPES**

Prat et al. Breast 2015  
Prat et al. BMC Med 2015

High discordance of mRNA levels.  
Difficult to apply a single cases

## PD-L1

- PD1 se expresa en las células T, NK y algunas B
- Tiene dos ligandos PD-L1 y PD-L2 que se expresan en muchas células del SI y en células tumorales

- La unión de PD1 y sus ligandos inactiva y disminuye la proliferación de los LT
